

1. Wrap the disc with food wrap then fold it. 2. ***Shred the discs.*** There are several CD shredders available that operate like common paper shredders. 3. Cut the discs. If you don't have a shredder, a heavy pair of scissors can easily cut

1501 St. Paul Street Suite 123
Baltimore, MD 21202

protective foil will crack and flake, which *can be messy*. Be careful, as cutting the disc is tough. If you prefer a ***clean and safer alternative, use ImageShare.***

4. Break the discs. Wrap the disc in a towel and then break or crack it with a firm kick or heavy hammer. The towel will *protect you* as CDs tend to ***SHATTER INTO PIECES.*** Dispose of them while wearing safety gloves. 5. Microwave the discs. Please the disc into a microwave and set it for 5 seconds, or until you see sparks along the surface of the disk. When you pull it out, it will have a spiderweb pattern of cracks. ***This might destroy your microwave, so do not try this without adult supervision.*** 6. Use duct tape to remove the foil lining from the disc

tape is firmly attached with a transparent ***knife.*** Some CDs are made of plastic. In this case, the CD. Once the

the trash. 8. Sand the discs. Use a belt sander on the label side. This is quite messy, so do it in an area that is easy to clean. 9. Center punch the discs. Using a self-firing center punch or a hand center punch and a manual punch, *strike a couple dozen deep dimples* into the shiny side of the CD or DVD. Anything less than a dozen
